Privacy throughout life

Privacy throughout life

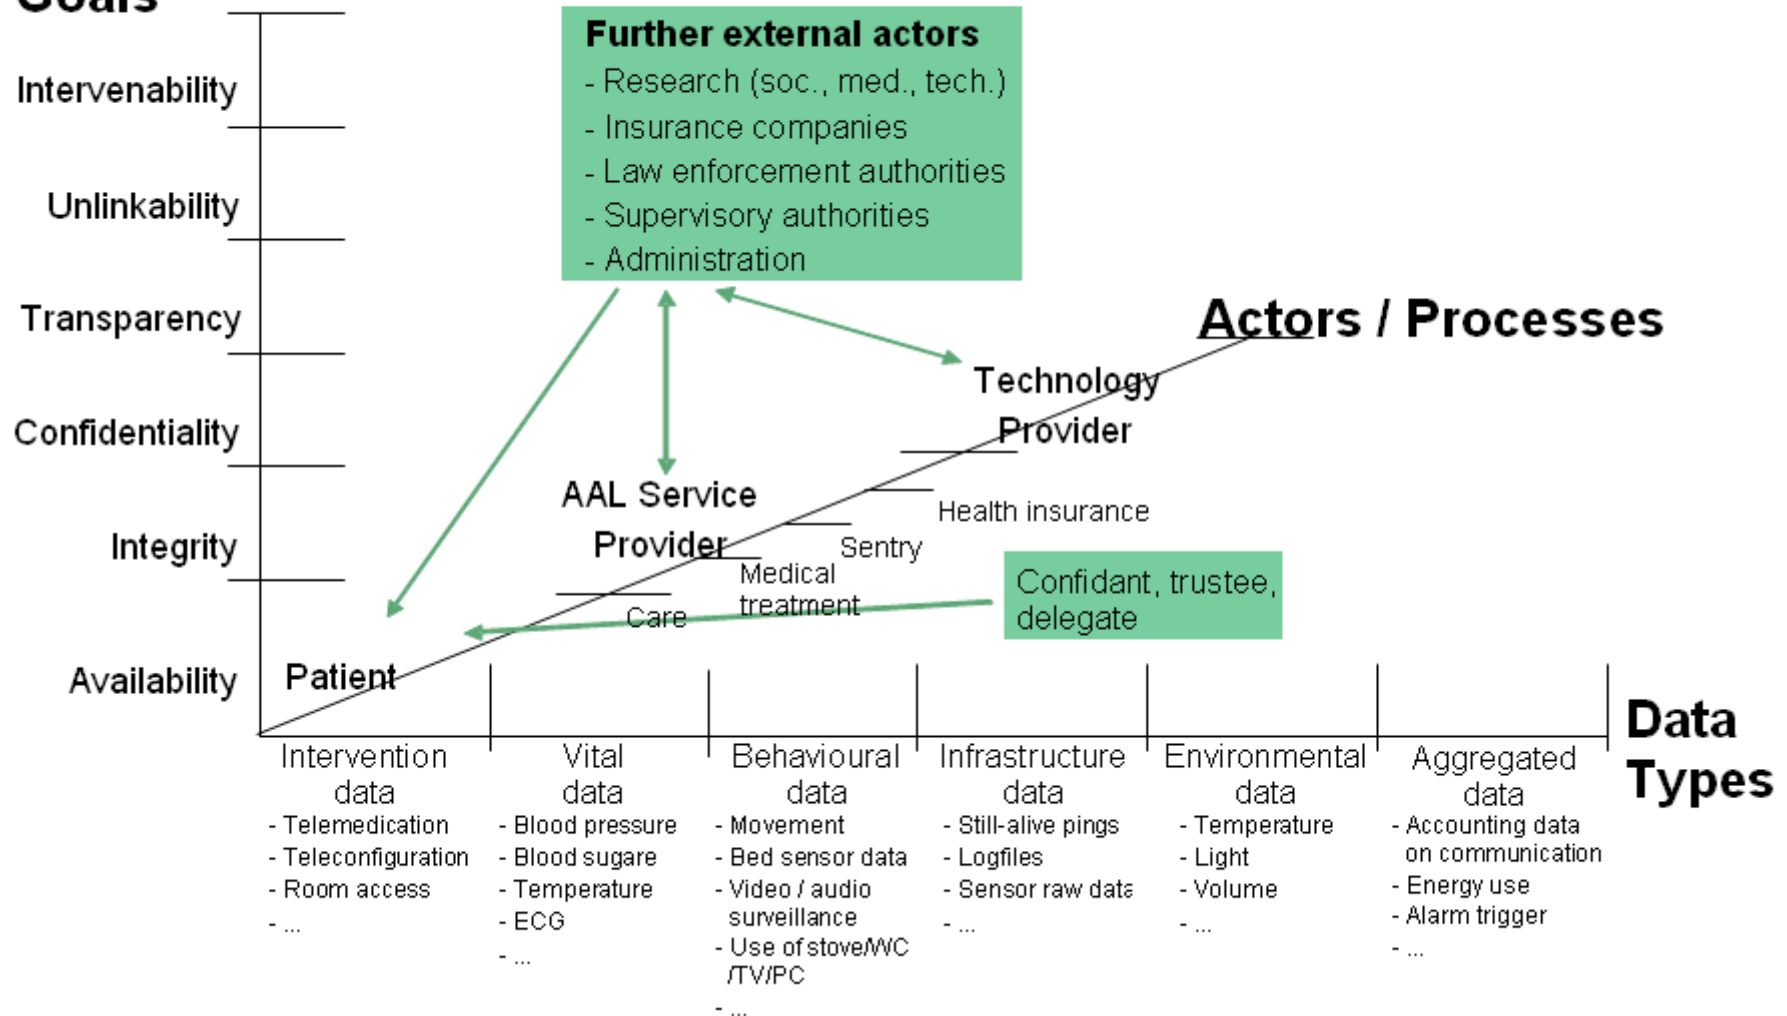

Approach for (IT) system + policy design: using an extended set of protection goals

Example of application: 3-dimensional matrix (source: ULD study on Ambient Assisted Living)

Protection Goals

Conclusion

For design of (IT) systems:

- consider **lifelong** challenges for privacy
- mechanisms required for people who – maybe temporarily – cannot manage their privacy needs by themselves
 - possible approach: **delegation**
 - do not forget the delegates' privacy rights!
- approach: extending the traditional IT security protection goals confidentiality, integrity and availability by the privacy-specific protection goals **transparency, unlinkability and intervenability**
- **balancing** needed
